

Instruction manual

- Upright Refrigerator HUS237VWH
- Upright Freezer HUS172VFWH

To ensure safe operation, please read this instruction manual thoroughly before use.

Please retain for future reference.

Husky reserve the right due to possible changes to design to alter the instruction manual without notice.

Welcome to your new Husky

Thank you for buying this Husky refrigerator/freezer. It has been designed and manufactured for many years of trouble-free service.

Operation is very simple, but please take a few minutes to read this user manual. It contains important safety information, and tips to ensure you receive the best possible service from your Husky unit.

Safety warnings

WARNING Keep ventilation grilles clear of obstruction in both the unit and its housing.
WARNING Do not use mechanical devices or other means to accelerate the defrosting process, other than those recommended by the manufacturer.

WARNING Do not damage the refrigerant circuit.

WARNING Do not use electrical appliances inside the food storage compartments of the appliance, unless they are of the type recommended by the manufacturer.

- The appliance must be unplugged after use and before carrying out user maintenance on the appliance.
- This appliance may be used by children aged from 8 years and above and persons with reduced physical sensory or mental capabilities or lack of experience and knowledge provided they have been given supervision or instruction concerning use of the appliance in a safe way and that they understand the hazards involved. Children must not play with the appliance. Cleaning and user maintenance must not be carried out by children without supervision.
- If the power cord is damaged it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard.
- Dispose of the refrigerator strictly in accordance with local regulations for the disposal of flammable blowing gas and refrigerant.
- Before you dispose of the appliance, remove the doors to prevent children becoming trapped.
- This appliance is intended to be used in household and similar applications such as:
 - staff kitchen areas in shops, offices and other working environments;
 - farm houses and by clients in hotels, motels and other residential type environments;
 - bed and breakfast type environments;
 - catering and similar non-retail applications.
- Do not store explosive substances such as aerosol cans with flammable propellant in the unit.

IT IS HAZARDOUS FOR ANYONE OTHER THAN AUTHORISED SERVICE PERSONNEL TO CARRY OUT SERVICING OR REPAIRS WHICH INVOLVE THE REMOVAL OF COVERS.

TO AVOID THE RISK OF ELECTRICAL SHOCK DO NOT ATTEMPT REPAIRS YOURSELF.

Installation

LOCATION

When selecting a position for your unit you should make sure the floor is flat and firm and the room is well ventilated. Avoid locating your unit near a heat source, e.g. cooker, boiler or radiator. Also avoid direct sunlight as this may increase the electrical consumption. Extreme cold ambient temperatures may also cause the unit not to perform properly. This unit is not designed for use in a garage or outdoor installation. Do not cover the unit.

When installing the unit, ensure there is at least 10cm of free space at the sides, rear, and top of the unit. This will allow air to circulate around the appliance and improve the efficiency of the cooling process.

REVERSING THE DOOR SWING

Tools required:

- Phillips style screwdriver
- Hexagonal spanner
- Flat screwdriver
- Hexagonal socket wrench.

1. Open the door and remove the hinge cover at top right.

2. Support the door safely and use a Phillips driver to remove the two screws that fix the top hinge to the cabinet. Set the door aside.

3. Take the top hinge (A) and flip it over. The door hinge mount (B) will then be pointing up. Disassemble the hinge mount with its nut and washer. Turn the hinge mount over so it is then pointing down and re-assemble into the top hinge. The finished item will look like (C).

4. Remove the door limit block from the right side of the door end. Remove the blanking plate on the left side of the door end and screw the door limit block into that void. The finished item will look like (D).

5. Tilt the appliance no more than 45° from vertical and use a hexagonal socket wrench to remove the screws that fix the bottom hinge to the unit. Move the bottom hinge to the left side of the unit and screw it into position.

6. Set the door securely onto the bottom hinge in its new position. Support the door whilst you re-fit the top hinge (see step 7).

7. Fit the flipped door top hinge into the hole on the top of the door. Screw the top hinge to the left of the cabinet top panel.

8. For a neat finish, fit the hinge cover over the void on the right side of the top panel.

9. Move the levelling foot to the opposite side of the cabinet. Using a spirit level, adjust the foot until the unit is level and stable.

DOOR HANDLE INSTALLATION (OPTIONAL)

Note: These illustrations are only for reference and the actual product may differ slightly. The unit must be disconnected from the power supply before attempting installation.

- 1: Remove two plug pins from the open side of the door. 2: Fit the handle to the door and fasten it with screws. 3: Insert the screw caps to cover the handle screws.

DOOR SPACE REQUIREMENTS

To allow the unit's door to open fully, you must position the unit in clear space measuring 902mmW x 1052mmD.

LEVELLING THE UNIT

To do this adjust the two levelling feet at the front of the unit. If the unit is not level, the door and magnetic seals will not be aligned properly. Ensure that the feet touch the ground before use. Looking down from the top, adjust the levelling feet by turning them clockwise or anticlockwise.

CLEANING BEFORE USE

Wipe the inside of the unit with a weak solution of bicarbonate soda, then rinse with warm water using a wrung-out sponge or cloth. Wash the shelves and salad bin in warm soapy water and dry completely before replacing in the unit. Clean the exterior of the unit with a damp cloth. If you require more information refer to the Cleaning section.

BEFORE USING YOUR UNIT

Do not damage the power cord under any condition so as to ensure safety use. Do not use when the power cord is damaged or the plug is worn.

Do not put flammable, explosive, volatile or highly corrosive items in the refrigerator to prevent damage to the product or risk of fire.

Do not place flammable items near the refrigerator to avoid risk of fire.

This product is a household refrigerator and shall be suitable only for the storage of foods.

According to national standards, household refrigerators shall not be used for other purposes, such as storage of blood, drugs or biological products.

To prevent bursts and other losses, do not place items such as bottled or sealed containers of fluid such as bottled beers and beverages in the freezer.

Before placing any food in your unit, turn it on and wait for 24 hours, to make sure it is working properly and to allow it time to fall to the correct temperature. Your unit should not be overfilled.

BEFORE PLUGGING IN – You must check that you have a socket which is compatible with the plug supplied with the unit.

BEFORE TURNING ON – Do not turn on until two hours after moving the unit.

INTERIOR ACCESSORIES

Various glass or plastic storage shelves are included with your appliance. Different models have different combinations.

You should always slide one of the full size glass storage shelves into the lowest set of guides, above the fruit and vegetable containers, and keep it in this position. To do this, pull the storage shelf forward until it can be swivelled upwards or downwards and removed.

To insert the shelf at a different height, do the above operation in reverse.

- In order to make the most of the volume of the fresh food storage compartment and frozen food storage compartment, you can remove one or more shelves or drawers out of the appliance, to your personal preference.

Product overview

- All images in this instruction manual are for illustration only. Please refer to your individual unit for details.

Operation

SWITCHING ON YOUR UNIT

The temperature selector knob is located on the middle of the top panel:

Setting “Min” – the temperature inside the unit will be less cold

Setting “Med” – normal operation (adequate for most situations)

Setting “Max” – the temperature inside the unit will be at its coldest

During high ambient temperatures, e.g. on hot summer days, it may be necessary to set the thermostat to the coolest setting (the “Max” setting). This may cause the compressor to run continuously in order to maintain a low temperature inside the cabinet.

When you first install your refrigerator, set the thermostat knob to “Med”. Give your

refrigerator time to cool down completely before adding food. It is best practice to wait 24 hours before adding food. The thermostat knob controls the temperature.

NOISE INSIDE THE UNIT

You may notice that your unit makes some unusual noises. Most of these are perfectly normal, but you should be aware of them.

These noises are caused by the circulation of the refrigerant liquid in the cooling system. It has become more pronounced since the introduction of CFC free gases. This is not a fault and will not affect the performance of your unit. This is the compressor motor working as it pumps the refrigerant around the system.

TIPS FOR KEEPING FOOD IN THE UNIT

Cooked meat and fish should always be stored on a shelf above raw meat and fish to avoid bacterial transfer. Keep raw meat and fish in a container which is large enough to collect juices and cover it properly. Place the container on the lowest shelf.

- Leave space around your food, to allow air to circulate inside the unit. Ensure all parts of the unit are kept cool.
- To prevent transfer of flavours and drying out, pack or cover the food separately. Fruit and vegetables do not need to be wrapped.
- Always let pre-cooked food cool down before you put in the unit. This will help to maintain the internal temperature of the unit.
- To prevent cold air escaping from the unit, try to limit the number of times you open the door. We recommend that you only open the door when you need to put food in or take food out.

Cleaning

DEFROSTING

Turn the unit off.

Remove the food from the refrigerator and store it properly to keep it cold. Clear the drain pipe using soft materials to prevent damage to the liner. Prepare the water containers for defrosting. Pay close attention to the compressor compartment water tray to prevent water overflowing.

You can use the ambient temperature for natural defrost, or you can also use the ice shovel to clear any frost. Only use a plastic or wooden ice shovel to avoid damage to the liner or drain pipe. Never use metal or sharp tools to clear ice.

You may also use an appropriate amount of hot water to speed up the defrost. Use a clean towel to dry the water after defrosting.

After defrosting, return the foods to the unit and turn it on.

CLEANING THE INTERIOR & EXTERIOR OF THE UNIT

Remove all the shelves and the salad bin. To remove the salad bin first remove the lower door shelf.

- Wipe the inside of the unit with a weak solution of bicarbonate soda and then rinse with warm water using a damp sponge or cloth. Wipe completely dry before replacing the shelves and salad bin.

-
- Use a damp cloth to clean the exterior; then wipe with a standard furniture polish. Make sure that the door is closed to avoid getting polish onto the magnetic door seal or inside the unit.
 - The grille of the condenser at the back of the unit and the adjacent components may be vacuumed using a soft brush attachment.

CLEANING TIPS

Condensation may appear on the outside of the unit. This may be due to a change in room temperature. Any moisture may be wiped away with a clean cloth. If the problem continues, contact a qualified technician for assistance.

Maintenance

CARE WHEN HANDLING/MOVING THE UNIT

Hold the unit around its sides or base when moving it. Under no circumstances should it be lifted by holding the edges of the top surface.

SERVICING

The unit should only be serviced by an authorised engineer and only genuine spare parts should be used. Under no circumstances should you attempt to repair the unit yourself. Repairs carried out by inexperienced persons may cause injury or serious malfunction. Contact a qualified technician.

SWITCHING OFF FOR LONG PERIODS OF TIME

When the unit is not in use for a long period, disconnect it from the power supply, empty all food and clean the appliance. Leaving the door ajar will help to prevent the build-up of unpleasant odours.

Troubleshooting

Before calling for after-sales service, please check the following points; you may be able to solve any problem yourself.

Problem	Solution
The appliance does not work.	• Check that the unit is plugged in and switched on. • Check for power failure, low voltage, or tripped circuit breaker.
There is an unpleasant odour.	• Strong-smelling foods should be wrapped closely. • Check if foods are out of date or mouldy. • Clean the interior.

Problem	Solution
The compressor may be heard working constantly.	• It is normal for the refrigerator to operate for longer where the ambient temperature is higher. • Do not load the unit with too much fresh contents at one time. • Do not put hot food into the unit. Wait for it to cool to room temperature first. • The door is being opened too often.
The light does not work	• Check that the unit is plugged in and switched on. • Check the light for damage.
The door cannot be closed properly	• Check that contents are not obstructing proper closure of the door. • Check the unit is not overfilled. • Check that the unit is level and stable.
The unit is excessively noisy.	• Check that the unit is level and stable. • Check the contents for loose items that may be vibrating against the shelves or interior walls

TROUBLESHOOTING NOTES

- The refrigerator enclosure may emit heat during operation specially in summer. This is caused by the radiation of the condenser, and is part of normal operation.
- Condensation: condensation may be seen on the exterior surface and door seals of the freezer when the ambient humidity high. This is a normal phenomenon, and any condensation may be wiped away with a clean cloth.
- Buzz: A buzz may be generated by the running compressor, especially when starting up or shutting down.

Tips for energy saving

- Try not to open the door too often, especially when the weather is humid and hot. If you open the door, close it as soon as possible.
- Ensure the appliance has sufficiently ventilation, including adequate air circulation behind the appliance.
- In normal temperature conditions, set the thermostat to the middle “Med” setting.
- Before loading the appliance with fresh food, ensure it is cooled to room temperature.
- A build-up of ice and frost will increase energy consumption, so clean the appliance as soon as the layer is 3-5 mm thick.
- If the unit has an external condenser, the back wall should be clean and free of dust or dirt.
- The appliance should be located in the coolest area of the room, away from heat producing appliances or heating ducts, and out of direct sunlight.
- Allow hot foods to cool to room temperature before placing in the appliance. Overloading

the appliance forces the compressor to run longer. Foods that freeze too slowly may lose quality, or spoil.

- Be sure to wrap foods properly, and wipe containers dry before placing them in the appliance. This cuts down on frost build-up inside the appliance.
- The appliance's storage bin should not be lined with aluminum foil, wax paper, or paper towels. Liners interfere with the circulation of cold air, making the appliance less efficient.
- Organise and label food to reduce door openings. Remove only as many items as needed at any one time, and close the door as soon as possible.

Disposal

Old units still have some residual value. An environmentally friendly method of disposal will ensure that valuable raw materials can be recovered and used again. The refrigerant used in your unit and insulation materials require special disposal procedures. Ensure that none of the pipes on the back of the unit are damaged prior to disposal. Up to date information concerning options of disposing of your old unit and packaging from the new one can be obtained from your local council office.

When disposing of an old unit, break any locks or latches and remove the door as a safeguard to prevent children becoming trapped.

CORRECT DISPOSAL OF THIS PRODUCT

This marking indicates that this product should not be disposed with other household wastes throughout the EU. To prevent possible harm to the environment or human health from uncontrolled waste disposal, recycle it responsibly to promote the sustainable reuse of material resources. To return your used device, please use the return and collection systems or contact the retailer where the product was purchased. They can take this product for environmental safe recycling.

For more information, please contact your local authority or the retailer where you purchased the product.
